01 | MOTIVATIONS for Med-CORDEX

- ▶ A climate change hot-spot (Giorgi, 2006)
- ▶ Many regional physical processes (cyclogenesis, regional winds, islands, narrow and shallow straits, key role of the rivers, extreme events, ...)
- ▶ Proved added-value of high-resolution RCM (Gibelin and Déqué, 2003; Gao et al. 2006; Herrmann et al. 2011)
- ▶ Proved added-value of Regional Climate System Model (RCSM) including air-sea-land-hydrology coupling (Somot et al. 2008; Artale et al. 2010)
- ▶ To serve the scientific objectives of MedCLIVAR and HyMeX
- ▶ Natural follow-on of the CIRCE project (existing modelling community)
- ▶ To share expertise and good practices in multi-component regional climate modelling
- ▶ To prepare clean model intercomparison for ARCM and RCSM
- ▶ To enhance the communication between the various communities (ocean, atmo, land, hydrology)
- ▶ To create new evaluation methods for the multi-component RCSM (best use of the new satellite products and new in-situ dataset)
- ▶ To be in phase with the HyMeX in-situ field campaign (2012-2014)
- ▶ To work together to the improvement of the RCSM and of their components (atmosphere, land surface, river, ocean)
- ▶ To deliver quality-checked regional climate products to the climate community and the impact community
- ▶ To deliver improved messages about the climate change in the Mediterranean area for the next IPCC report (IPCC-AR5)

02 | MODELLING and SIMULATIONS

- CORE SIMULATIONS** (as for all CORDEX domains)
- ▶ One common Mediterranean domain (Med and Black Seas + catchment basin excluding the Nile + Near-Atlantic)
 - ▶ Minimal Spatial Resolution: 50 km
 - ▶ Simulation 1: ERA-Interim lateral forcing for validation (1989-2007)
 - ▶ Simulation 2: IPCC historical run as LBC (1950-2005)
 - ▶ Simulation 3: RCP8.5 scenario run as LBC (2006-2100)
 - ▶ Simulation 4: RCP4.5 scenario run as LBC (2006-2100)
 - ▶ One driving GCM and one transient simulation for each RCM
- TIER1 SIMULATIONS**
- ▶ RCSM: Regional Climate System Model (atmosphere, ocean, land surface, hydrology, river)
 - ▶ Very High resolution RCM (up to 10 km, same domain)
 - ▶ Transient runs mandatory for the RCSM
 - ▶ Other driving GCMs
 - ▶ ERAInterim (from 1979 and after 2007)
 - ▶ ERA40 forcings (1958-2001)
 - ▶ The HyMeX Long Observing Period 2010-2020 for a better evaluation
 - ▶ Ocean model hindcast and scenario
 - ▶ Land surface model hindcast and scenario
- TIER2 SIMULATIONS**
- ▶ NCEP forcing
 - ▶ RCSM twin control run
 - ▶ ARCM with explicit convection
 - ▶ RCSM new components (aerosol, dam, irrigation, ...)
 - ▶ Other RCP scenarios
 - ▶ Other RCM members for a given lateral forcing
 - ▶ Other GCM members
 - ▶ Big-Brother approach

03 | The MedCORDEX MODELLING TEAM

Components	Model	Developing phase	ERA40 run	ERA-Int run	Hist + RCP
PROTHEUS Artale et al. 2010	ALRO RegCM BATS IRIS MITgcm	Ok	Ok

IC3	ALO WRF ROMS	in dvt			

▶ Up to now, 14 modeling centers have joined the Med-CORDEX initiative including groups in Italy, Spain, France, Israel, Turkey, Germany, Tunisia and Serbia

▶ Among them, 11 groups are going to use coupled RCSM. 6 RCSM are already running (see results)

▶ In addition, at least 3 groups are going to run 10km-ARCM (see results)

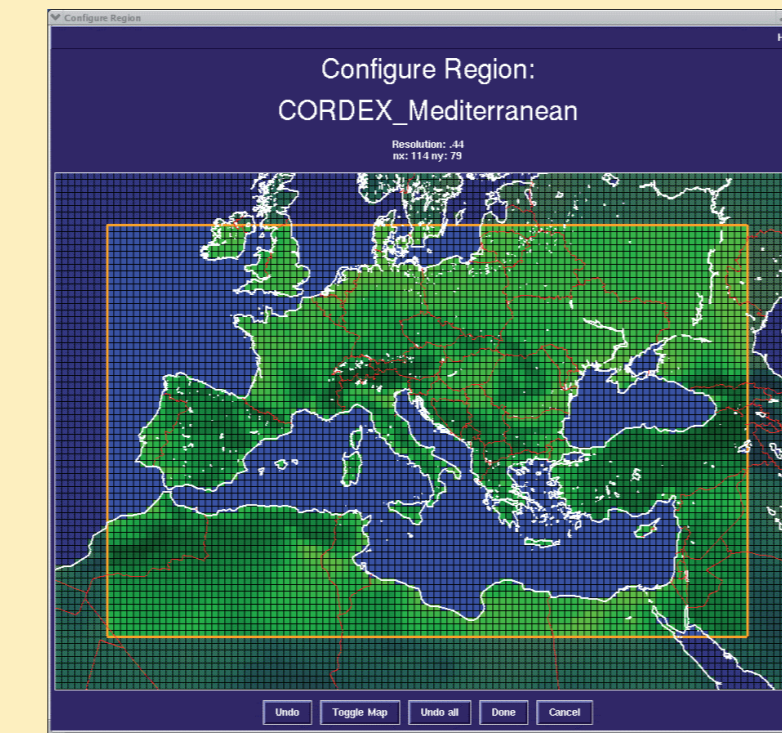

A: atmosphere
L: land surface
R: river
O: ocean

Details of the Regional Climate System Models

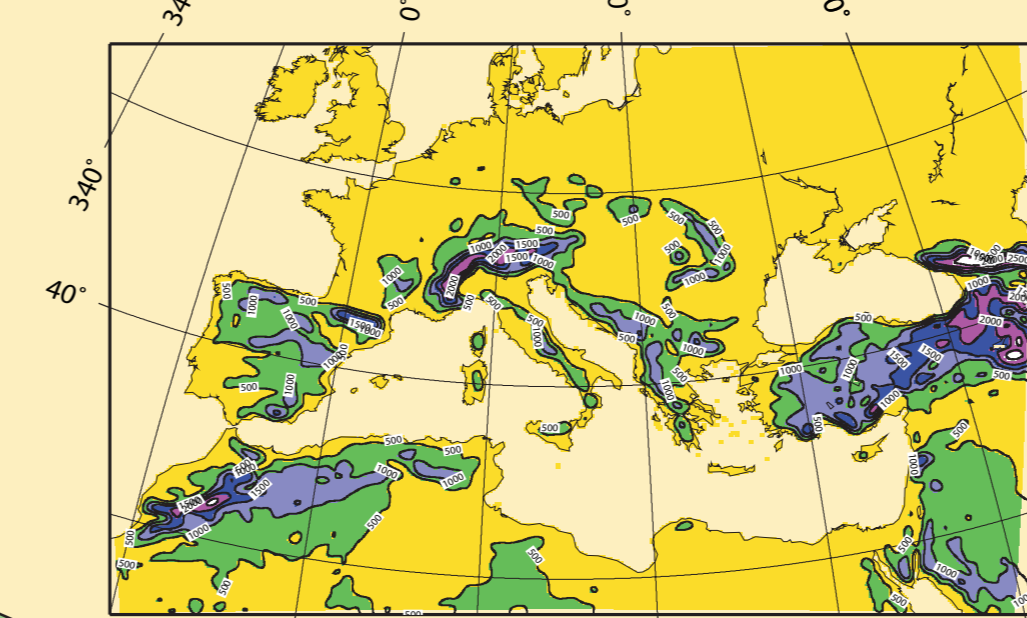

Components	Model	Developing phase	ERA40 run	ERA-Int run	Hist + RCP

04 | The MedCORDEX EVALUATING TEAM

Challenges:

- ▶ Spatial inhomogeneous data coverage
- ▶ Need for multi-component evaluation
- ▶ Small scale features and scale interactions
- ▶ Land-sea contrast problem and low resolution of the current satellite products

Solutions:

- ▶ Gather specialists of the various components and fields (process, in-situ, satellite, model)
- ▶ Take advantage of HyMeX community and field campaign
- ▶ Promote regional reanalyses
- ▶ Promote new coastal satellite products

Process to be evaluated	Possible evaluating teams
Med Sea Water and Heat budget	UMD, ENEA, CNRM, CNRM, ICTP, ETHZ, MPI
Gibraltar Strait	Univ. Malaga
SST, SSS	ENEA, CMS, CNRM, CMM
Surface circulation	OGS, INGV, ENSTA
River	CEFREM, ENEA, CNRM, MERCATOR, MPI
Wind over the sea	ENEA, CMM, GUF, CNRM, Puertos de l'Estado
Extreme over land	LSCE, DMI, LMD
cloud	LMD
aerosols	ICTP, LA
Water masses	CNRM, ENSTA
EMT and WMT	MERCATOR, HCMR, CNR, LEGOS
Cyclones	FUB
Large-scale pattern	CERFACS
Atmospheric rivers and water vapor	TAU, CRC Dijon, MPI, UCM
Sea level	IMEDEA, NOCS, LEGOS

06 | MedCORDEX ORGANISATION
